

Air Cushion Finish stage rider - duo

(2017)

(possible
audience)

ACF are a duo, an ambient band, occasionally very dynamic.

Low stage or no stage is lovely, near to audience.

We'll need a *working* and noiseless stereo PA system. We bring no amplifiers ourselves.

Instruments - git/perc/vox/electronics/mix - vox/electronics/mix2

Music will be mixed from stage - we supply 2 x stereo outputs on XLR to FOH, in DJ conditions also just stereo.

We'd like to kindly ask for

- cabling to your stage box/mix desk, 1/4" jacks, XLR or RCA.
- 2 x ground monitors (w/ good bass - mirroring FOH left and right) - in small situations we need no monitors at all, if we can stand in line with the PA speakers.
- 2 x working mic stands with boom
- 2 x tables approx 70(60)x80 cms, 60 cms high (*not* much larger, please - tables can be round, coffee house style 80x80 cms) - tables are not completely in front of us (pedals instead).
- 2 x chairs, without armrests

Build-up and take down

Build-up approx. 60 mins. Table/s can be set up off stage in good light. Soundcheck 15-25mins. Line check and go is possible. Take down after show 5-10 mins, *if* tables are hauled in whole to backstage/other safe area. - else 25 mins.

Notes

1. Please don't use stroboscopes or fog.
2. Single coil pickups present. Any light equipment on sound circuit will cause heavy hiss.
3. Stage monitor level shall be low. Feedback risks apply nevertheless (intended).
4. Light: Calm, please. No video. We'll need to see text sheets on floor.
5. We'll record the performance. Please supply unaltered mix on RCA stereo to our recorder (Sony PCM D100).

Mix notes

Leave sound completely original, please. No vncersion. If digital mixdesk please bypass and send straight to analogue graphic eq/main amps.
